

ENVIROMENT AND TECHNICAL PROGRESS AROUND US

A.V.Lebedka, Y.O.Kaba – Sumy State University, group IT-11

D.O.Marchenko – E L Adviser

Our Earth is our home and people must take care of our Motherland. There are a lot of industrial enterprises in our country, that's why we can't ignore the problem of the protection of our environment. Our main aim is the protection.

In today's modern world, technological progress is important for all countries. It is undeniable that technological progress has contributed greatly to the development of countries across the world. The development of many modern machines has led to air pollution. This leads to poor air quality.

Positives:

- Better technology can help us study and better understand how we are affecting the environment.

Negatives:

- Advancements in exploitation techniques can also get rid of things such as forests, aquifers, and other natural resources we need.
- Technology of production vehicles, air-conditioning and other advanced gadgets have caused air pollution.
- Carbon dioxide and other greenhouse gases are released into the air, causing global warming.

The problem of protecting the nature is of primary importance today. With the rise of advanced technology, the rapid spread of industrialization and the increase of human population pollution has become a universal problem.

Our environment must be clean. We have to control atmospheric and water pollution, to study the man's influence on the climate. The pollution of the environment influences the life of animals, plants and our human life.
