Problems degree projects in modern conditions.

The implementation of any project in the real business is not possible without a comprehensive solution of financial, technical, legal, institutional, and other aspects. Performing a graduation project for some specialty students primarily focused on addressing the proprietary issue, sufficient to demonstrate his skills, not taking into account the depth of the complexity of such a project in a real production environment or business.

Representatives of personnel services companies have repeatedly stressed the existence of the problem of adaptation to the conditions of the graduates of teamwork.

In contrast to the European system of education of Ukrainian higher school is focused on the acquisition of students theoretical and individual knowledge, often without an applied nature and isolated from the real world. Conducting research in the departments implemented in isolation without a discussion of the results to interdepartmental and inter-faculty research seminars.

Modern information tools allow you to organize the effective interaction and a comfortable environment for the exchange of information, but the use of these opportunities for faculty research and project work in collaboration with colleagues in other departments and with the students remains at a low level.

A possible variant of the organization interdepartmental projects:

- organization interdepartmental scientific seminars for related to search and fixing those for future joint projects;
- implementation of joint baccalaureate qualification works;
- development of joint research programs for specialists and magister.

Information technology to organize interdepartmental of the graduation projects.

Despite the availability of education modern information on-line services, using them to support the learning process can be made more efficient interaction of teams of teachers and students from different disciplines.

With the “cloud” on-line services such as Google docs or Microsoft Live@EDU is possible to significantly improve the interaction of the participants and provide them with mobility, but at the same time and get the necessary information security project. These technologies are available and free of charge to schools, do not require any specialized knowledge of web programming, a modern attractive interface.

Benefits of the interdepartmental project:

- students may have with practical skills in teamwork;
- establishment of interdepartmental creative teams and ready to implement complex projects in a particular sector of the economy;
- develop skills to interact with the information space;
- intensification of the work of departments and faculties to fulfill contractual and grant projects.
