FLYING CARS

M. Bezdidko – Sumy State University, group IT – 32
S.G. Zolotova – E L Adviser

We can say that car is the most popular method of transport. There are thousands of different models of cars. All innovations are moving forward and soon we will see cars that can fly.

Flying cars might help us to avoid too many crashes and tramps. We know that unusual plane was invented by American company a couple of years ago. This plane can ride on the roads and even can be parked in the garage. And a company from Massachusetts named “Terrafugia” began to develop this car. This car will resemble a helicopter. At the Bloomberg conference Toyota’s representative said that the company considers developing cars that can fly in the air. But this car will fly only a few metres above the road. Such cars will work like a hovercraft. This innovations will make friction lower.

On the Pioneers Festival a version of flying car named “AeroMobil” was presented. We can compare the sizes of Aero Mobile with car of the executive class. Flying cars in average can fly at a distance of 750 kilometers while the usual car can drive 850 kilometres. Scientists promise to start producing flying cars by 2020.

The design of flying car of the future should be safe for the driver, passengers and others. This can be only achieved with the control system in the form of autopilot that can independently control a flying car and correct human’s mistakes.

In conclusion we can see that flying cars are our future. And they will be very useful for some jobs. First of all, flying cars can be very good ambulances even in big cities. So it will be a very big step to better life. We believe that humanity will make the age-old dream named flying car true in the nearest future.
