- The regional physical infrastructure to provide energy, water, materials, buildings, and mobility in a way that is both ecologically and economically efficient.

-The region to be recognized as a place that is in the forefront of the sustainability revolution, becoming an economically, socially, and environmentally better place to live, work, and locate a business.

A Sustainable Economic Development Strategy provides guideposts on the way to the full realization of the promise of the sustainability revolution. As such, it can help create a place that the residents will be proud to hand on to their children and their children's children.

SUSTAINABLE ECONOMIC DEVELOPMENT

There are many definitions of sustainable development, including this landmark one which first appeared in 1987: "Development that meets the needs of the present without compromising the ability of future generations to meet their own needs."— from the World Commission on Environment and Development's (the Brundtland Commission) report *Our Common Future* (Oxford: Oxford University Press, 1987).

Increasingly, "green," "sustainable," or "low-carbon" development is seen as a pathway to economic recovery, resilience, and prosperity. A growing number of cities and regions are recognizing that their climate, energy, and economic development goals and agendas are parts of the same whole. The interest in sustainable economic development and the "clean economy" has gained increasing attention in recent years.

Sustainable development ties together concern for the carrying capacity of natural systems with the social and economic challenges faced by humanity. Research in this area tackles the issue of how to improve our economy and our environment at the same time, with a particular focus on creating employment and preserving well-paying jobs. Sustainable development may involve improvements in the quality of life for many but, particularly for the affluent, may necessitate a decrease in resource consumption.
