CREATING A QUESTIONNAIRE OF LYME DISEASE

I. Lutai Sumy State University, group ACIIImi-9.1

M. Chemych PhD, prof.- scientific supervisor

S. Zolotova – E L Adviser

Relevance. Currently there is a tendency for increasing Lyme disease in Sumy region. The increase of the indicator by 1.7 times indicates that the epidemiological situation in Ukraine and Sumy region remains difficult. The increase in the incidence of the disease indicates the widespread of Lyme disease in Sumy region.

The aim of the study. Creating a questionnaire to help raise awareness of Lyme disease, prevention and consequences.

Materials and methods. Patients who have been attacked by ticks and have sought medical help at Sumy Regional Infectious Diseases Clinic conduct an anonymous survey, with the voluntary consent, according to the created questionnaire.

Research results. The unified anonymous questionnaire "Questionnaire of the patient with the Lyme disease "contains 16 questions with answer options and the ability to make your own comments. The first group of questions relates to gender, age and social data of the person. The second group of questions addresses the epidemiological features of this pathology. The third group shows methods of tick removal, prevention measures for prevention of suction, awareness of antibiotic prophylaxis. The fourth group is the clinical features of the disease.

Conclusion. According to the anonymous questionnaire an action plan will be developed to prevent the disease, in accordance with designated areas of Sumy region for the risk of infection.
