## Краткое описание

The paper analyses the conditions of developing the renewable energy sources in the Poland and Ukrainian energy sector. The analyses of European experience are shown that the world leaders' are increasing the share of the renewable energy in the total energy consumption. They create the favorable conditions for the development, financing and implementing the ecological projects for using alternative energy sources. Besides the production and use of biogas energy is one of the important sectors of renewable energy in the world. The paper analyzed the economic effect of biogas project in Poland and Ukraine. The authors systematized the main instruments and mechanism to stimulate the developing of the biogas sector. © 2015 IJED.
