Редакційна колегія:

Сидоренко Ольга Павлівна – кандидат педагогічних наук,
доцент, завідувач кафедри мовної підготовки іноземних громадян
Сумського державного університету;

Біденко Лариса Валентинівна – кандидат педагогічних наук,
доцент кафедри мовної підготовки іноземних громадян Сумського
державного університету;

Левенок Інна Сергіївна – доктор філософії з педагогічних наук,
старший викладач кафедри мовної підготовки іноземних громадян
Сумського державного університету

НЗ4 **Наукова** спільнота студентів XXI століття : матеріали
VII Всеукраїнської науково-практичної студентської
онлайн-конференції /упоряд. О. П. Сидоренко, Л. В.
Біденко, І. С. Левенок. – Суми : Сумський державний
університет, 2024. – 138 с.

Матеріали містять тексти доповідей учасників VII Всеукраїнської науково-практичної студентської конференції «Наукова спільнота студентів XXI століття». Досліджуються проблеми впровадження інноваційних методів навчання української мови як іноземної, формування мовної особистості в новому полікультурному просторі (проблеми адаптації, діалог культур, формування поліетнічної толерантності), застосування нових технологій у процесі викладання загальноосвітніх дисциплін на підготовчому відділенні для іноземних студентів.

VALUE ORIENTATIONS OF THE CONCEPT OF SUSTAINABLE DEVELOPMENT

Introduction. In an era marked by significant ecological challenges and growing concerns about social inequality, the concept of sustainable development emerges as a beacon of hope, guiding humanity towards a future where economic growth does not come at the expense of environmental degradation and social disparity [3]. This principle is not just about environmental stewardship; it represents a comprehensive framework that integrates economic viability, environmental protection, and social equity. Central to achieving this triad of objectives are the value orientations that inform and direct our actions and

policies. These values are critical in molding the attitudes and behaviors of individuals, communities, and institutions, encouraging a shift towards more sustainable practices and decision-making processes.

We consider Sustainable Development as a holistic approach that seeks to meet the needs of the present without compromising the ability of future generations to meet their own needs. This definition, first popularized by the Brundtland Commission in 1987 [1; 4], has evolved and been enriched by numerous studies and interpretations across various disciplines. Modern European researchers have further expanded on this concept, emphasizing its multidimensional nature that encompasses environmental, economic, and social sustainability.

Relevance. The concept of sustainable development has garnered significant attention in the global discourse, owing to the pressing need to address environmental degradation while ensuring economic growth and social equity. The relevance of studying sustainable development lies in its capacity to provide a balanced approach to meeting

present needs without compromising the ability of future generations to meet their own. This concept has evolved from being an environmental slogan to a comprehensive framework guiding policies, strategies, and practices across various sectors and scales.

Purpose of the Study. The primary purpose of this study is to explore the value orientations that underpin the concept of sustainable development. This involves an examination of the ethical, economic, social, and environmental values that inform and shape the understanding and implementation of sustainable development. By identifying these value orientations, the study aims to contribute to a more nuanced and comprehensive understanding of what drives and sustains efforts towards achieving sustainable development goals.

Main Results of the Study. The study's investigation into the value orientations of the concept of sustainable development yielded detailed insights, revealing a rich tapestry of interwoven ethical, economic, social, and environmental considerations. Each of these orientations

plays a critical role in shaping the framework and execution of sustainable development initiatives. The study identifies several key value orientations that are central to the concept of sustainable development. Below is an expanded discussion on the main results:

Ethical Orientation. The study highlights the profound ethical underpinnings of sustainable development, where the value of nature is not merely instrumental but intrinsic. This orientation argues for the protection of the natural world for its own sake, advocating for a stewardship model that respects the rights of nature and future generations. Ethical considerations also extend to issues of intergenerational equity, where the needs and rights of future generations are held as paramount, guiding current actions and policies.

Economic Orientation. The economic dimension of sustainable development emphasizes the need for integrating environmental sustainability into the core of economic planning and decision-making. It champions the development and adoption of green technologies, which not

only mitigate environmental damage but also offer new economic opportunities through sustainable industries. This orientation stresses the importance of transitioning towards a circular economy, where resource use is optimized, waste is minimized, and the overall economic system operates within the ecological limits of the planet.

Social Orientation. Social values are central to sustainable development, focusing on equity, inclusiveness, and justice. The study elaborates on how sustainable development seeks to address the disparities and inequalities that exist within and between societies. It underscores the imperative to ensure that all individuals and communities have access to the resources and opportunities necessary for a sustainable and dignified life. This orientation advocates for participatory governance and policy-making processes that empower marginalized groups and foster a sense of collective responsibility towards sustainability goals.

Environmental Orientation. The environmental aspect of sustainable development is underscored as a fundamental pillar. This orientation concerns itself with the

conservation of biodiversity, the protection of ecosystems, and the sustainable management of natural resources. It calls for a profound rethinking of human activities and their impacts on the planet, advocating for practices and technologies that reduce environmental footprints. The study points out that environmental sustainability is not an isolated goal but is intrinsically linked to economic and social well-being, forming a holistic approach to sustainable development.

The study's findings on these value orientations underscore the multifaceted nature of sustainable development. It reveals that achieving sustainability goals requires a balanced and integrated approach that respects and incorporates these diverse values. This comprehensive understanding of the value orientations of sustainable development is crucial for formulating effective strategies and policies that are both inclusive and effective in addressing the complex challenges of our time.

As we strive for a world where peace is not merely the absence of conflict but the presence of justice, equality, and

prosperity, the United Nations' Sustainable Development Goals emerge as the foundational building blocks. Each goal, with its unique focus, contributes to the mosaic of global peace. The Global Council for Tolerance and Peace is a thread that weaves a story of hope and harmony. By embracing sustainable development principles and advocating for tolerance, dialogue, and inclusivity, we pave the way toward a future where peace is not a distant dream but a tangible reality [2]. The synergy of these forces is a testament to humanity's potential to coexist in unity, transforming challenges into opportunities for a brighter, more peaceful tomorrow.

Conclusions. The study concludes that the concept of sustainable development is underpinned by a complex interplay of ethical, economic, social, and environmental values. These value orientations provide a multifaceted framework that informs the goals, strategies, and practices of sustainable development. The integration of these values is essential for the realization of sustainable development goals, as it ensures a holistic approach that considers the

well-being of the planet and its inhabitants.

Prospects for the Next Studies. Future studies should aim to explore how these value orientations are operationalized in different contexts and scales, from local communities to global policies. Additionally, research should investigate the challenges and opportunities in integrating these values into practical sustainable development initiatives. Understanding the dynamics between these value orientations and the practicalities of implementation will be crucial for advancing sustainable development efforts worldwide.
