“TO MAKE THE WORLD SMARTER AND SAFER”

(Sumy, March 23, 2017)
Mesotherapy – is a new technique, but it has very old roots. This procedure is relevant because it can be removed from various shortcomings of the skin, eliminate or prevent age-related skin changes, make the correction cheekbones and oval face, to achieve a lifting effect, remove cellulite. It was developed in 1950 in France.

With the help of mesotherapy, it is possible to reduce the fat in the “spot” treatment with particular emphasis on the notorious problem areas such as the buttocks, love handles, inner thighs, neck and chin. Many practitioners also claim that mesotherapy can help drastically reduce cellulite, eliminate wrinkles, remove scars and even stimulate hair growth.

The procedure itself is fairly straight-forward. A special “cocktail” of vitamins, minerals and medications is injected directly into the layer of fat located just beneath the skin. Once injected, this cocktail theoretically “melts” away the fat by breaking fat cells down to the point where they can be flushed out through the bowels and kidneys.

It should be stressed on side effects of mesotherapy such as bruising, heightened sensitivity, damage to the liver, itching, swelling, redness and burning.

There are two basic types of mesotherapy: “classical mesotherapy” and “needle-free mesotherapy”. The first one is basic. It is divided into manual and hardware. The second type of mesotherapy is for patients who are afraid of pain and prefer mesotherapy, using devices for electrophoresis, phonophoresis and devices that inject drugs under oxygen pressure.

It is natural that at the beginning of the third millennium health and beauty are still important, but you should be ready to get the desired result not only using methods that are proven for thousands of years but with new technologies.
